Heat Pump Pad™

The Heat Pump Pad™ is a new offering from DiversiTech that's a great year-round solution for proper heat pump operation. Starting with a compact 36" base, the Heat Pump Pad™ raises the pump a full 8" off the ground on a stable, star-shaped riser platform for maximum operating efficiency in snowy climates. This tough pad is precision molded from eco-friendly, recycled polypropylene and includes 8 high quality anti-vibration pads that are engineered to fit perfectly into special slots on the risers for quiet, vibration-free operation. Other thoughtful features include a base angled to direct melting snow or water away from the unit, as well as a design that nests together for easier transportation and warehousing.
