

FLUSHING SOLVENT

Pro-Flush Line Set Adapter

The **Pro-Flush Line Set Adapter** is a convenient tool that makes it a snap to flush line sets....in many applications flushing the line set becomes a one person job! The Pro-Flush Line Set Adapter is a way to flush line sets without having to carry everything to the basement or attic. When used as directed, the Line Set Adapter will create a complete connection from the liquid line to the suction line at the disconnected air handler.

With the adapter connected, all flushing and solvent collection can be done outside at the condensing unit so that no lingering solvent fumes remain indoors once a job has been completed. This new method allows a single contractor to monitor both the introduction of the solvent to the lines, and the solution exiting the line set at the same time. Convenient and ensures maximum efficiency on every line set flushing job.
